Continuation of Substance of Interview including description of the general nature of what was agreed to if an agreement was reached, or any other comments: Applicant will file a response to the final rejection. Arguments have been discussed. Applicant's position is that the prior art does not teach to determine the wear of the rapier band by measuring its temperature. Applicant states that the examiner does not have motivation to combine references. The Examiner's position is that for 103 rejection, the Examiner has a teaching that the wear of the rapier band (moving object) needs to be determined and can be determined by using an electromagnetic radiation, and the secondary reference teaching that the wear of a moving object can be detected by using an electromagnetic radiation/ infrared radiation/ temperature..
